

Overview

Robotics & Automation are firmly set on a long-term growth trajectory, supported by a unique combination of accelerating technological advances and powerful macro factors. Rapid developments in technologies such as computing and artificial intelligence, motion control, machine vision and learning, enable an increasingly broad range of applications throughout the global economy. Meanwhile, aging demographics and the emergence of a new, enormous class of increasingly demanding consumers will continue to drive efforts to boost productivity and quality across markets.

The ROBO Global® Robotics and Automation UCITS Index was first to market in June 2014 and the objective is to provide investors with a comprehensive, transparent and diversified benchmark representing the global value chain of robotics, automation and enabling technologies. The index methodology follows a modified equal weighting scheme and rebalances on a quarterly basis to respond to changes in the technological and competitive landscapes and maintain diversification. Including the leading players in a proportionate and modified equal weighted fashion ensures that the index capture the growth trend while minimizing company-specific risk. The index is designed and maintained by ROBO Global® LLC and their team of industry experts.

Index Methodology and Industry Classification

Coverage Team - The index is supported by a unique coverage team comprised of research and academic leaders from within the Robotics and Automation Industry who work closely with our management team.

Database - We maintain an active database of over 1,000 companies globally engaged in the Robotics and Automation Industry.

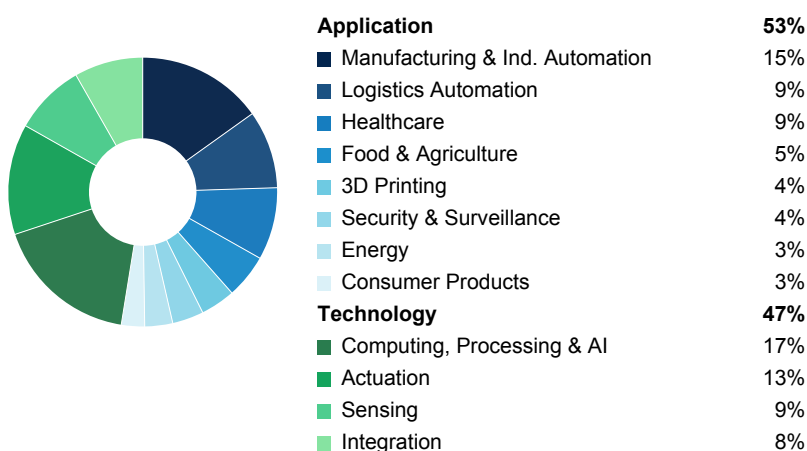

ROBO Global® Industry Classification - In the absence of a benchmark industry classification system for Robotics and Automation we created the ROBO Global® Industry Classification. Companies included are publicly traded on approved exchanges, and derive a substantial portion of revenues from Robotics and Automation related activities. Companies are defined as either a 'Technology' company with 5 sub sectors or an 'Application' provider with 8 sub sectors.

Index Filters - Index constituents are initially selected from the ROBO Global® Industry Classification in accordance with predetermined rules and objective criteria including minimum market capitalisation and average daily value traded.

Modified Equal Weighting - The Index is comprised of "bellwether" (BW) and "non-bellwether" (NBW) companies. BWs are well established leading players, whose core business is directly related to Robotics and Automation. NBWs have a distinct portion of their business and revenue in Robotics and Automation and have the potential to grow through innovation and market adoption of their products and services. BWs are allocated 40% of the index and NBW 60%. Within BW and NBW each constituent is equally weighted. The 40/60 weighting results in each BW having roughly twice the weight of each NBW.

Quarterly rebalance - The index rebalances on a quarterly basis to respond to new entrants and maintain diversification.

ROBO Global® Industry Classification⁴

Applications - highlights all index companies that incorporate multiple robotic and automation technologies into their product or manufacturing process to improve efficiency in traditional business lines as well as the development of entirely new business propositions.

Technology - captures all index companies that manufacture or provide services related to any machinery, equipment, devices or sensors supporting a robot performing its task. It also includes those companies that provide key-enabling software and processing technologies used to advance the conversion to autonomous systems. Essentially, we are looking at the companies that enable robots to sense, process and act.

Past performance of an index is not a guarantee of future results. The value of investments may go down as well as up and potential investors may not get back the amount originally invested. It is not possible to invest directly in an index. Exposure to an asset class represented by an index is available through investable instruments based on that index. ROBO Global makes no assurance that investment products based on the index will accurately track index performance or provide positive investment returns. A decision to invest in any such investment fund or other investment vehicle should not be made in reliance on any of the statements set forth in this document. ROBO Global is not in a position to give advice on the suitability of any investments for potential investors. Prospective investors are advised to make an investment in any such fund or other vehicle only after carefully considering the risks associated with investing in such funds, as detailed in an offering memorandum or similar document that is prepared by or on behalf of the issuer of the investment fund or other vehicle. Inclusion of a security within an index is not a recommendation by ROBO Global to buy, sell, or hold such security, nor is it considered to be investment advice.
